WORKING PAPERS	Foreign Exchange Interventions and Intermediary Constraints. With Alex Ferreira, Rory Mullen, Giovanni Ricco and Ganesh Viswanath-Natraj. Abstract: We study the impact of foreign exchange interventions during periods of tight credit constraints. Expanding on the Gabaix and Maggiori (2015) model, we predict that long-lived spot interventions have larger effects on exchange rates than shortlived swaps, unanticipated interventions are more impactful, and tighter credit constraints amplify effects. Using high-frequency data on Brazilian Central Bank interventions from 1999 to 2023, we find that unanticipated spot sales of USD reserves lead to significant domestic currency appreciation and reduced covered interest parity deviations. Spot interventions outperform swaps, especially when global intermediaries are constrained, and enhance market efficiency by lowering USD borrowing costs. Presentations: Brazilian Central Bank, 2024 CEPR Workshop on Macroeconomic Policy in Emerging Markets, 2024 RCEA International Conference, the 24th Brazilian Finance Annual Meeting, 2024 CEBRA Annual Meeting, 2024 Warsaw Macro-Finance Conference, and the 2024 RES PhD conference.
